                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- FUNCTION: Probable helicase involved in mitochondrial function Required for rapid turnover of mRNAs containing a premature translational termination codon.
-!- SUBCELIAULAR LOCATION: Present predominantly in the cytoplasm, is also found in small quantities in the nucleus.
-!- SIMILARITY: Belongs to the DNA2/NAM7 helicase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EMBO

ALS4 is a rare, childhood- or adolescent-onset, autosomal dominant form of amyotrophic lateral sclerosis that is characterized by slow disease progression, limb weakness, severe muscle wasting, and pyramidal signs associated with degeneration of motor neurons in the brain and spinal cord. Amyotrophic lateral sclerosis denote a heterogeneous group of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (AOA2) [MIM:606002]. AOA2 is an autosomal recessive adolescent-onset cerebellar ataxia with additional oculomotor apraxia or with associated elevated serum alpha-fetoprotein (AFP), immunoglobulins and creatine kinase levels but no oculomotor apraxia. Most affected individuals have both oculomotor apraxia and elevated AFP levels. The most debilitating feature of the AOA syndrome is the progressive neurodegeneration associated with loss of Purkinje cells and ectopic location of these cells in the molecular layer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    respiratory muscles.
SIMILARITY: Belongs to the DNA2/NAM7 helicase family.
CAUTION: Ref. 3 (CAD97857) sequence differs from that
a frameshift in position 1626.

The method is useful for identifying compositions or agents which increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae motif peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying an agent that increases nonsense suppression, for antiviral therapy, by contacting modulator of translation termination (Mttl) in Saccharomyces cerevisiae with a test agent, and detecting specific binding to Mttl.
                                                                                                                                                                                             22-JUL-1998;

```
CC the RNA helicase MTI with a composition or agent under conditions
CC specific binding between the MTI and the composition, detecting
CC specific binding of the test composition or agent to the MTI. The
CC determining if the test composition or agent to the MTI. The
CC composition and methods are useful for modulating the fidelity of
CC translation termination or for identifying agents that: affect the
CC functional activity of mRNAs by altering frameshift frequency, permit
CC transcripts, and provide modulators (inhibitors/stimulators) of peptidyl
CC transferase activity during initiation, elongation, termination and mRNA
CC degradation of translation. The agents, which may be antagonists or
CC agonists, are useful in screening, diagnostic and therapeutic purposes,
CC for diseases or conditions resulting from or cause premature translation,
CC such as beta-thalassaemia, beta-globin, Duchenne/Becker Muscular
CC Dystrophy, Haemophilia A, Haemophilia B, Von Willebrand Disease,
CC Osteogenesis Imperfecta, Breast cancer, Ovarian Cancer, Wilms Tumour,
CC Hirschlesterolaemia, Retinitis Pigmentosa, or Neurofibromatosis,
CC Retinoblastoma, ATM or Costmann Disease. The present sequence represents
CT the amino acid sequence of the yeast translation termination modulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying a test composition or agent that modulates the efficiency of translation termination comprises contacting the MTTI with the test composition or agent, and determining if the test composition or agent inhibits the MTTI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 35; SEQ ID NO 3; 41pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to modulates the efficiency

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC transferase activity, especially diseases resulting from a nonsense or CC frameshift mutation e.g. beta-thalassemia, beta-globin, Duchene/Becker CC Muscular Dystrophy etc. It can be used to identify disease conditions CC involving a defect in the complex, by transfecting cells with encoding concleic acid and determining the proportion of defective complex before and after transferase activity during translation, inhibiting the complex level in the ransferase activity during translation, inhibiting the complex expression and so modulate encoding translation. Vectors comprising polynucleotides encoding translation cells to can be constructed and introduced into cells to contranscripts in a cell. Agents binding to the complex can be identified and included in therapeutic compositions useful as above, and/or used to modulate peptidyl transferase activity during translation of aberrant complex can be identified and included in therapeutic compositions useful as above, and/or used to modulate peptidyl transferase activity during translation termination of mRNA and/or during translation termination of mRNA at a nonsense codon and/or promote degradation of aberrant compositions modulate the efficiency of translation termination of compositions modulate the efficiency of translation termination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                        CC microbial source. The invention also relates to a transformed plant of comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC such as maize or soybean. The method of producing a transformed plant CC having an improved property comprises transformed plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plants with the CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth rate by modification of the cell cycle pathway with plant growth rate by modification of content, improved yield by modification of carbohydrate, nitrogen or CC content, improved yield by modification of photosynthesis or by CC providing improved lignin production or improved galactomanan or improved galactomanan or improved galactomanan or involved invention. Note: The sequence data for this pattent did not CC form part of the printed specification but was obtained in electronic format from USPTO at sequence data for this pattent did not compare the content of the printed specification but was obtained in electronic content.

                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71556 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New Streptococcus protein for the treatment or prevention of infection disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            27-OCT-2000; 2000GB-00026333.

cc encoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated containing the polypeptide by the containing the polypeptide; (5) producing the polypeptide; (6) inhibited by the continent of the polypeptide; (6) inhibiting cellular continent of the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a gene in an operon required for continent of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation; (8) continent of the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of contiferation of an organism. The antisense mucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational continuity of prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to a recombinant DNA construct comprising a CC promoter functional in a plant cell, where the promoter is positioned to CC provide for expression of a polynucleotide encoding a polypeptide from a CC microbial source. The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC such as maize or soybean. The method of producing a transformed plant CC recombinant DNA construct and growing the transforming a plant with the CC polynucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of the cell cycle pathway with plant growth regulators, increased rate of CC content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of protosynthesis or by providing improved plant growth and development under at least one stress CC condition, improved plant growth and development under at least one stress CC condition, improved lignin production or improved galactomannan CC production. Note: The sequence exact a bacterial polypeptide used in the corp part form uptoned the printed specification but was obtained in electronic forms part of the printed specification but was obtained in electronic condition.
                                                                                                                                                                                 Query Match

                                                                                          CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC having an improved property comprises transforming a plant with the crocombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, improved plant properties, e.g. improved cold, heat or drought tolerance, concerned to herbicides, extreme osmotic conditions, pathogens or pests, cc increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or content, improved plant growth and development under at least one stress cc condition, improved plant growth and development under at least one stress cc condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not compared the printed specification but was obtained in electronic features.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from microbial source. The invention also relates to a transformed plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (CAOY/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                               with the 2706bp nucleic acid; a vector containing the MAA3 gene or one captured by the year, a transformed by the vector; a nucleotide containing the partial sequence of continuous 14 bases or more in the 2706bp nucleic acid or its complementary sequence; and a transforming plant with characters modified by making a female reproductive cell lethality or forming only the seed which does not contain a specific allele. The MAA3 gene is derived from Arabidopsis thaliana and is useful for making a female reproductive cell a lethality by suppressing the expression of the MAA3 gene. The MAA3 gene is useful for setting the number of seed to 1 for 2n by inserting antisense MAA3 cuse in n places of plant genome. The novel method of the invention is useful for producing transgenic plant-derived foodstuffs, which contain a forceign gene in neither a seed nor an endosperm. The MAA3 nucleotide fragment is useful as probe for detecting the MAA3 gene and is also useful for modulating the expression of the MAA3 gene. This sequence represents the 818 amino acid MAA3 protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         given in the specification or a sequence which has deletion, substill or addition in the amino acid(s) of the 818 amino acid protein. The invention further relates to: a gene encoding the MAA3 protein; DNA containing the MAA3 gene, as a 2706 nucleotide sequence, given in the specification or a sequence which hybridizes under stringent conditions.
                                                                                                                                                                                                                Sequence 818
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel magatama mutant (MAA3) protein for female reproductive cell formation, having an 818 amino acid sequence,

                                                                                                                                                                                                                          promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant with improved plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant drowth remilators increased resistance.
                                                  of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic
                                 scope of the invention.

                                                                                                                                                                                                                                              The invention relates to Pseudomonas aeruginosa polypeptides and the golymucleotides encoding them. The sequences are useful in diagnosis and cherapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a component of the ability to bind a P. aeruginosa nucleic acid, as components of concluding anti-P. aeruginosa drugs, as targets for antibacterial drugs, concluding anti-P. aeruginosa drugs, as templates for recombinant concluding anti-P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-caused confection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CC ABO84396 represent P. aeruginosa olypeptides of the invention. Note: The specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                          The present invention describes an isolated polynucleotide (I) of Alloicoccus otitidis genomic DNA, which encodes an antigenic protein. CC Alloicoccus otitidis is a Gram-positive bacterium. Also described: (1) CC an isolated polypeptide that is encoded by the polynucleotide (I); (2) an expression vector comprising the novel isolated polynucleotide (I), its complement, degenerate variant or fragment; (3) a genetically engineered complement cell, transfected, transformed or infected with the vector of (2); (4) an antibody specific for the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide, its complement, bological equivalent or fragment, or the polynucleotide that is comprising the complement polypeptide of (1); (5) an immunogenic composition vector; (6) a pharmaceutical composition comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) immunising against Alloicoccus otitidis by administering to a host the containing the novel polynucleotide, its degenerate variant or fragment; (8) immunogenic composition; (9) detecting and/or identifying Alloicoccus otitidis in the biological sample; (10) a kit comprising a container containing the novel polynucleotide, its degenerate variant or fragment, cor the antibody of (4), and (1) producing a polypeptide by culturing the polypeptide from the culture. (1) can be used in gene therapy. The polynucleotides, polypeptides, antibodies and compositions of the present invention can be used for treating and diagnosing diseases, drug creening assays and monitoring of effects during drug clinical trials. The polynucleotides are useful for expressing and detecting Alloicoccus otitidis. The present sequence represents an Alloicoccus otitidis
Sequence 352 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 33; SEQ ID NO 1880; 1019pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              effects during drug clinical trials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Alloiococcus otitidis polynucleotides and polypeptides, useful for treating and diagnosing diseases, drug screening assays and monitoring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB; ADB07939
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-NOV-2001;

                                                                                                                                           The present invention describes an isolated polynucleotide (I) of CC Alloiococcus otitidis genomic DNA, which encodes an antigenic protein. CC Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1) CC an isolated polypeptide that is encoded by the polynucleotide (I); (2) an isolated polypeptide that is encoded by the polynucleotide (I); (2) an isolated polypeptide that is encoded by the polynucleotide (I); (2) an isolated polypeptide (I) and CC complement, degenerate variant or fragment; (3) a genetically engineered complement, degenerate variant or fragment; (3) a genetically engineered composition comprising the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide (1); (5) an immunogenic composition vector; (6) a pharmaceutical composition comprising the expression vector; (6) a pharmaceutical composition comprising the complement, or the polypeptide of (1) a protein chip comprising an array confidency of (1) and a carrier; (7) a protein chip comprising an array confidency of (1); their biological equivalent or fragment; (8) containing against Alloiococcus otitidis by administering to a host the immunogenic composition; (9) detecting and/or identifying Alloiococcus otitidis in the biological sample; (10) a kit comprising a container containing the novel polymucleotide, its degenerate variant or fragment, correction to the polypeptides, and (11) producing a polypeptide by culturing the correction containing the culture; (1) can be used in gene therapy. The polymucleotides polypeptides, antibodies and compositions of the present correction protein from the present sequence represents an Alloiococcus otitidis. The present sequence represents an Alloiococcus otitidis continidis contains and the correct of the present sequence represents an Alloiococcus otitidis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New Alloiococcus otitidis polynucleotides and polypeptides, useful for treating and diagnosing diseases, drug screening assays and monitoring effects during drug clinical trials.
                                                                                             Sequence

CC Alloicoccus otitidis genomic DNA, which encodes an antigenic protein.
CC Alloicoccus otitidis is a Gram-positive bacterium. Also described: (1)
CC an isolated polypeptide that is encoded by the polynucleotide (1); (2) an
CC expression vector comprising the novel isolated polynucleotide (1); (2) an
CC complement, degenerate variant or fragment; (3) a genetically engineered
CC composition comprising the polypeptide of (1); (5) an immunogenic
CC (4) an antibody specific for the polypeptide of (1); (5) an immunogenic
CC expression vector; (6) a pharmaceutical composition comprising the
CC expression vector; (6) a pharmaceutical composition comprising the
CC expression vector; (6) a pharmaceutical composition comprising the
CC polypeptide of (1) and a carrier; (7) a protein chip comprising the
CC immunogenic composition; (9) detecting and/or identifying Alloicoccus
CC containing the novel polynucleotide, its degenerate variant or fragment; (8)
CC or the antibody of (4); and (11) producing a polypeptide by culturing the
CC or the antibody of (4); and (11) producing a polypeptide by culturing the
CC polypucleotides, polypeptides, antibodies and compositions of the present
CC convention can be used for treating and diagnosing diseases, drug
CC invention sasays and monitoring of effects during and alloicocccus
CC the polymocleotides are useful for expressing and detecting Alloicocccus
CC titidis. The present sequence represents an Alloicocccus otitidis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                           The present invention describes an isolated polynucleotide (I) of CC Allolococcus otitidis genomic DNA, which encodes an antigenic protein. CC Allolococcus otitidis is a Gram-positive bacterium. Also described: (1) CC an isolated polypeptide that is encoded by the polynucleotide (I); (2) an isolated polypeptide that is encoded by the polynucleotide (I); (2) an isolated polypeptide that is encoded by the polynucleotide (I); (2) an isolated polynucleotide (I); (2) an isolated polynucleotide (I); (3) an isolated polynucleotide (I); (5) an isolated complement, degenerate variant or fragment; (3) a genetically engineered complement, degenerate variant or infected with the vector of (2); (6) host cell, transformed or infected with the vector of (2); (7) an isolated polynucleotide (I); (5) an isolated in the composition comprising the polypeptide, its complement, biological equivalent or fragment, or the polynucleotide that is comprised in the CC expression vector; (6) a pharmaceutical composition comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) (7) a protein chip comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) (8) immunising against Allolococcus otitidis by administering to a host the containing the biological sample; (10) a kit comprising a container containing the novel polynucleotide, its degenerate variant or fragment, cromatining the novel polynucleotide, its degenerate variant or fragment, comprising and the polypeptide from the culture. (I) can be used in gene therapy. The comprision can be used for treating and diagnositions of the present container may be polynucleotides, polypeptides, antibodies and compositions of the present continues of the present sequence represents an Allolococcus otitidis outlides on the container of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Alloiococcus otitidis polynucleotides and polypeptides, useful for treating and diagnosing diseases, drug screening assays and monitoring effects during drug clinical trials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Alloiococcus otitidis; antigenic protein; immunogenic; gene therapy; Gram-positive bacterium; infection.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB

Patent No. 6833447

GENERAL INFORMATION:
APPLICANT: Goldman, Barry S.
APPLICANT: Hinkle, Gregory J.
APPLICANT: Hinkle, Gregory J.
APPLICANT: Wiegand, Roger C.
APPLICANT: Wiegand, Roger C.
APPLICANT: Wiegand, Roger C.
FITLE OF INVENTION: Myxococcus xanthus Genome Sequences and FILE REFERENCE: 38-10(15849)B

CURRENT APPLICATION NUMBER: US/09/902,540

CURRENT FILING DATE: 2001-07-10

PRIOR APPLICATION NUMBER: 60/217,883

PRIOR FILING DATE: 2000-07-10
                                                                                                                                                                                                                                                                                              RESULT 2
US-09-902-540-13564
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   APPLICANT: Peltz, Stuart
APPLICANT: Czaplinaki, Kevin
APPLICANT: Czaplinaki, Kevin
APPLICANT: Dinman, Jonathan D.
TITLE OF INVENTION: A SUBPAMILY OF RNA HELIC
TITLE OF INVENTION: THE FIDELITY OF TRANSLAT
TITLE OF INVENTION: THEROP
